

Ethical Hacking Task 01 - Reconnaissance Report

Target: Amazon.com

Objective: Perform passive reconnaissance using publicly available information.

WHOIS Summary

Registrar: MarkMonitor Inc.

Created: Nov 1, 1994

Updated: Apr 22, 2026

Expires: Oct 31, 2026

DNS Summary

A, MX, NS and TXT records were identified successfully using DNSChecker.

Website Technologies

HTTP/3, Amazon Web Services (AWS), Amazon CloudFront CDN, Open Graph, core-js, Tailwind CSS detected via Wappalyzer.

HTTP Security Headers

SecurityHeaders grade: A. Present: CSP, X-Frame-Options, X-Content-Type-Options, HSTS.

Missing: Referrer-Policy and Permissions-Policy.

Robots.txt

robots.txt is publicly accessible and contains crawler directives.

Sitemap

sitemap.xml was not publicly accessible and returned an error page.

Header	Present
Content-Security-Policy	Yes
X-Frame-Options	Yes
X-Content-Type-Options	Yes
Strict-Transport-Security	Yes
Referrer-Policy	No

Conclusion

This reconnaissance exercise demonstrated how publicly available information can be collected without interacting with or exploiting a target system. WHOIS records, DNS information, website technologies, HTTP security headers, robots.txt, and sitemap analysis provided valuable insights into Amazon.com's infrastructure. The activity highlighted the importance of passive reconnaissance during ethical hacking while respecting legal and ethical boundaries. No unauthorized access or exploitation was performed.
